

Open Source backend in 1 file

✓ Realtime database ✓ Authentication ✓ File storage ✓ Admin dashboard

The screenshot shows the PocketBase admin interface. On the left is a sidebar with icons for collections (users, messages, posts, messagesReport) and system settings (+ New collection). The main area shows the 'posts' collection with three records. Each record has fields: id, title, description, active, options, and featuredImages. A 'Live demo' button is overlaid on the third record. At the bottom of the main area is a 'Read the documentation' button.

	id	title	description	active	options	featuredImages
1	WyAw4bDrvws6gGl	Another example	N/A	False	N/A	N/A
2	FtHAW9feB5			False	optionA optionC	
3	UP06yiyglm1			True	optionB

Ready to use out of the box

Realtime database

Embedded performant database with schema builder, data validations, realtime subscriptions and easy to use REST api.

Authentication

Manage your app users and handle email/password and OAuth2 sign ups (Google, Facebook, GitHub, GitLab) without the hassle.

File storage

Safely store files locally or in a S3 storage. Easily attach media to your database records and generate thumbs on the fly.

Extendable

Use as a standalone app OR as a framework, that you can extend via Go and JavaScript hooks to create your own custom portable backend.

```
// JavaScript : JavaScript      Dart
import PocketBase from
'pocketbase';
```

```
const pb = new
PocketBase('http://127.0.0.1:8090'
);
```

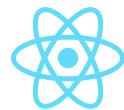

...

```
// list and search for 'example'
collection records
const list = await
pb.collection('example').getList(1
, 100, {
  filter: 'title != "" &
created > "2022-08-01"',
  sort: '-created,title',
});
```

```
// or fetch a single 'example'
collection record
const record = await
pb.collection('example').getOne('R
ECORD_ID');
```

```
// delete a single 'example'
collection record
await
pb.collection('example').delete('R
ECORD_ID');
```

Integrate nicely with your favorite frontend stack
