

## Edge Security @EdgeSecurity

Nov 5

Apparently, if your process name starts with the letter 'X', Linux's DRM subsystem will change its API behavior. Something having to do with hacking the kernel rather than fixing X11... Yowza.

## lore.kernel.org/lkml/2022110...

```
case DRM_CLIENT_CAP_ATOMIC:
    if (!drm_core_check_feature(dev, DRIVER_ATOMIC))
        return -EOPNOTSUPP;
    /* The modesetting DDX has a totally broken idea of atomic. */
    if (current->comm[0] == 'X' && req->value == 1) {
        pr_info("broken atomic modeset userspace detected, disabling atomic\n");
        return -EOPNOTSUPP;
    }
    if (req->value > 2)
        return -EINVAL;
```
