GPD Pocket 4 Modular Mini Laptop – AMD Ryzen AI 9 HX 370 (Strix Point), 8.8" 144Hz, KVM & RS-232 Support

The GPD Pocket 4 is redefining what a compact computing device can do, delivering exceptional performance in a sleek, portable package. Designed for professionals who demand a reliable workstation on the go, tech enthusiasts who crave cutting-edge innovation, and gamers who need serious power in a small form factor, the GPD Pocket 4 exceeds expectations on all fronts. Elite Strix Point Performance: Featuring the 12-Core Ryzen AI 9 HX 370 (Zen 5) and Radeon 890M Graphics. Experience 80 TOPS of AI power and desktop-rivaling multitasking in a 770g chassis, this versatile device effortlessly handles everything from intensive productivity tasks to immersive entertainment and specialized professional applications. The GPD Pocket 4 is the ultimate fusion of power, portability, and versatility.

Revolutionizing On-the-Go Efficiency: The GPD Pocket 4's Adaptable Architecture and Business-Grade Screen

A 360° Design for Ultimate Flexibility and Functionality Ultimate Versatility

The GPD Pocket 4 takes portable computing to the next level with its cutting-edge 360° hinge design, delivering unmatched versatility to adapt to your lifestyle. With a full range of motion, this device effortlessly transitions between multiple modes: laptop mode for serious productivity, tablet mode for seamless browsing or creative tasks, tent mode for presentations or video playback in tight spaces, and stand mode for immersive gaming or hands-free streaming.

The robust hinge mechanism is engineered with precision, ensuring smooth, reliable operation even after prolonged use, making it a device you can count on every day. This flexibility allows you to optimize the GPD Pocket 4 for any environment, whether you're working in a coffee shop, giving a client presentation, or enjoying your favorite media on a flight.

Optical Superiority: Engaging with the High-Res 2560×1600, 144Hz 8.8-Inch LTPS Touch Panel

The GPD Pocket 4 boasts a sleek, compact design, making it a portable powerhouse without compromising on visual quality. Its 8.8-inch LTPS display, with a stunning 2560×1600 resolution, delivers razor-sharp visuals with a pixel density of 343 PPI. Whether you're gaming or engaged in professional content creation, the 144Hz refresh rate ensures buttery-smooth visuals. The display's peak brightness of 500 nits and 97% DCI-P3 color gamut coverage guarantee vibrant, accurate colors, perfect for any environment—from dimly lit workspaces to bright outdoor settings. Adding to its versatility, the innovative rotating display allows users to effortlessly transition between laptop and tablet modes, adapting to your needs on the fly. The GPD Pocket 4 is designed not just to perform but to impress with its high-end display and adaptable design.

Small but Mighty: AMD Ryzen Processing Power Housed in a Featherweight 1.69lb (770g) Body

The GPD Pocket 4 redefines portability and power with its sleek, compact design tailored for modern professionals and tech enthusiasts. Measuring just 8.14 x 5.69 x 0.87 inches (20.68 x 14.45 x 2.22 cm) and weighing a mere 1.69 lbs (770g), this device is designed for ultimate convenience. Its lightweight and portable form factor make it perfect for slipping into a bag, holding alongside your smartphone, or using comfortably on the go. Despite its compact size, the GPD Pocket 4 is packed with premium features, including a high-resolution touchscreen, modular connectivity options, and cutting-edge performance powered by AMD Ryzen processors. Ideal for productivity, gaming, or creative tasks, it combines versatility with a sleek, minimalist aesthetic. Built with premium materials and advanced engineering, the GPD Pocket 4 is the perfect device for those who demand power and portability in one elegant package.

Product Overview: The Ultimate 2-in-1 Mini Laptop and Tablet

Compact, versatile, and powerful, the GPD Pocket 4 is your perfect companion for work and entertainment. This premium 2-in-1 device offers the ideal balance between portability and performance, making it the ultimate tool for professionals on the go.

Unleash Ultimate Connectivity: Expansion and Mobility on the GPD Pocket 4

Comprehensive Interfaces: Maximizing Productivity with MicroSD Expansion, USB-A, and Ergonomic Dual Controls.

The GPD Pocket 4 Mini Laptop is designed to keep you connected and productive, no matter where you are. It features a high-speed USB 4.0 port with an effective bandwidth of 40Gbps, ideal for connecting to external graphics solutions like the [GPD G1 eGPU docking station](#). This allows users to significantly enhance the device's graphical performance, making it capable of handling demanding games and graphic-intensive tasks with ease. In addition to the USB 4.0 port, the GPD Pocket 4 offers a microSD card slot for expandable storage, a versatile USB-A port for connecting a wide range of peripherals, and supports an optional 4G LTE Expansion Module for seamless mobile connectivity. With these comprehensive connectivity options, the GPD Pocket 4 ensures you can stay connected, productive, and ready for anything, whether you're working remotely or gaming on the go.

The Power of 40Gbps: Connecting eGPUs and Multiple Monitors via the High-Speed USB 4 Port.

True Remote Freedom: Staying Online Anywhere with the Optional 4G LTE Expansion Module.

Engineered for the Modern Pro: Modular Versatility and AI-Driven Performance

The GPD Pocket 4 is designed to provide a seamless and intuitive user experience, catering to a wide range of professional and personal needs. Powered by the latest software and equipped with advanced AI capabilities from the [Ryzen AI 9 HX 370](#) processor, this device enhances productivity by enabling faster and more efficient workflows across various applications. Its The Field Engineer's Dream: Swap modules in seconds. Use the KVM module for server management, the RS-232 module for industrial debugging, or the 4G LTE for remote site access.

The World's First Modular 3-in-1 Workstation

Stop carrying multiple specialized tools. The GPD Pocket 4's rear expansion port lets you hot-swap hardware modules to fit your job:

- KVM Module: Control servers or industrial PCs directly from your handheld via HDMI-in and USB.
- RS-232 Module: Professional-grade serial port for debugging industrial equipment and PLCs.
- 4G LTE Module: Insert a SIM card for mission-critical connectivity where Wi-Fi doesn't exist.
- microSD Module: Instant storage expansion for high-res media and backups.

With a robust 44.8Wh battery providing up to 9 hours of use and support for 100W fast charging, the GPD Pocket 4 ensures that you stay productive throughout the day with minimal downtime. Its compact design makes it easy to carry, making it the perfect choice for professionals and tech enthusiasts who need a powerful, portable computing solution.

Tailored Utility: Customizing Your Workflow with Optional KVM, RS-232, and 4G LTE Modules.

8.8" 144Hz Visionary Display

It's not just a small screen; it's a professional-grade panel.

- 144Hz Refresh Rate: Buttery-smooth motion for gaming and UI navigation.
- **2.5K Resolution (343 PPI): High-density text for coding and reading technical manuals without eye strain.**
- 500 Nits Brightness: Visible even on outdoor job sites or under bright office lights.

Just received my lil pasocon

The laptop was delivered fast and intact. Works fine. Very light, all connections and touchscreen is OK.

The only thing, I forgot that it would be delivered from GB (I am in Spain), so the charger was for different power outlet, but ofc it works absolutely fine with my mobile charger.

✓ VERIFIED PURCHASE

So far so good

I got the 32GB RAM version with the new CPU model.

My review so far:

Speed: Amazing-everything feels fast and responsive.

Battery life: Around 6–8 hours with typical office use.

Ports: Easy to use overall, though the USB charging port is in a slightly awkward position at the back center.

Overall, it's been a near-excellent experience so far.

Excellent ordinateurur

Installation rapide. Pour le clavier QWERTY il faut s'habituer et rechercher les combinaisons pour les accents et autres. Pour mon utilisation c'est parfait. Bureautique, Internet...

Je peux l'emmener partout avec moi contrairement aux ordi classic.

Brilliant little laptop

I actually needed this for my magicavoxel editing and pixel Asprite editing and for my lore background game I am currently developing.....

This is exactly what I wanted and I'm grateful for Droix for allowing me to purchase it from them.... had no problems so far and yeah you now have a customer for life 🙌

Perfect little thing

I have this one turned on running some scripts 24/7 and when I get home from work I don't wanna open a large laptop-bag and fiddle around with a large laptop - so I turn to the Pocket 4. It's been great so far. Takes a while to type correctly on it but it's just muscle memory. Would recommend!

Amazing little buddy PC for everyday carry

Great work from GPD to make something like this. I love this little laptop as part of my everyday carry. I got the one with the Ryzen AI 9, with 32GB RAM and 2TB SSD storage. There's plenty of power here to pretty much do anything that I already do on my desktop PC, from all my creative endeavours with illustration and graphic design, to even some light gaming like Helldivers 2. I saved a factory image of the original Windows 11 install in case I ever need to put it back on, and immediately loaded up Linux Mint 22.3. On this distro, it was able to detect the touchpad, keyboard, screen rotation, and touchscreen. However, I too had issues with the screen defaulting to portrait orientation, so linux-users beware, you might have to setup a startup command to rotate the screen rightside, or run a GRUB-level script to correct. Maybe other distros handle this better, but I found my solution. The max battery life that I could pull on power saver with this distro is a whopping 7-9 hours, far more than I would need it to be for my use case. If you're gaming, expect this to drop down drastically to 1-2.5 hrs. 3-5 hrs if your games are much lighter.

The 8-9" size and light weight makes it really easy to throw in a bag and have it disappear, something that I couldn't say about my larger gaming laptop. So the Pocket 4 fills in a niche that I never thought I needed until now. It's just reassuring to always have a near-desktop quality computer quite literally in my back pocket at all times now.

There were a few minor faults though. My model came with a broken T-key scissor switch, which likely broke during shipment as the climate here is far below freezing. However, customer service was able to provide me a replacement switch, and this has been largely corrected. Something to consider if you're living in colder regions. Another fault simply just comes from the size of the device. The extra portability is both a pro and a con. It's big screen for a small device, but a small screen for long-term use. If you're using this for extended periods, it would help to plug in a monitor through the USB-C port for a more comfortable extended period.

Overall I love this laptop, and would highly recommend this to anyone even considering a portable laptop smaller than 13". It might just be your next everyday carry laptop.

Review for GPD Pocket 4 Mini Laptop

First I wanna say that I ditched Windows 11 on this in favor of CachyOS. I also tried Bazzite but CachyOS ended up getting straight up like 20% more battery life on light tasks. So that's what most of my experiences are from.

Screen: Very clear and uniform. Colors and contrast are mediocore. Maximum screen brightness is OK, but minimum brightness isn't quite low enough for comfortably using it in the dark. Some games and Operating Systems get really confused by it and the only resolution that maps correctly to your screen is the native 1600x2560 resolution, all others are rotated into the wrong orientation leading to a tiny image with massive black bars around it.

Keyboard: I'm used to full size german QUERTZ layout so this one is pretty different than I'm used to. I'm still adjusting but layout wise it's OK. Though the keys feel a bit flimsy and some take a bit more additional force to register a press past the tactile click which can lead to missed inputs.

Speakers: Servicable, but not at all impressive. At volume levels of about 40% and above the keyboard can start to resonate and buzz on some sounds.

Microphone: The mic placement makes no sense: It is on the main chassis right next to the touchpad so every single touch, movement and noise from fans and speakers get transferred directly into it. You can't truly fix that without an external mic but it would be much better if it was on the lid instead.

Performance: Pretty impressive for it's size. Games I've only played Phasmophobia and PEAK. Phasmophobia runs incredibly well easily getting well above 100 FPS. PEAK struggles a little but it's perfectly playable. In the firmware settings you can switch the available VRAM between 8 and 16 GB which is neat, although that setting is buried between random stuff.

Fan: Audible, but fairly quiet on idle and light tasks. In firmware settings there's a simple option for custom fan behavior, setting those don't do anything.

Battery life: Not very impressive at all. I'm getting around 3 to 6 hours on regular use but it can down to less than 1 hour on full system utilization. In it's defense though, this is such a small device that you physically can not fit that much more battery inside. My biggest issue with it is that there is no ability to slow charge, so many external batteries, power banks and cables don't work at all.

One of the coolest things you can do with it is put it in tablet mode and put it in a clamp-on tablet controller to effectively turn it into a gaming handheld. I used a Steam Deck before this one but ended up REALLY missing having a physical keyboard so the pocket's size, versatility and performance are like the perfect mix for me, despite some of it's aforementioned issues. I also had a laptop years ago but barely ended up using it because regular laptop sizes turned out to be just a bit too cumbersome.

Awesome features in a very small body

The laptop is and has everything you could want from a full-size one (and even more).

So far, I've tested with Windows and it works okay, including LTE modem. The only problematic thing is sleep and wakeup. In 70% cases, the laptop either won't go to sleep (heating up in the case), or goes to sleeps but wakes to a black screen (some workarounds like putting it to sleep again sometimes help). This is definitely not the Modern Standby experience Windows wants from laptops... I tried enabling S2/S3 sleep in UEFI, but the behavior was basically the same. From system log, it seems that the culprit is the fingerprint sensor. I updated its driver to latest version, which helped a bit, but not 100%.

Also, GPD should figure a good and reliable way of distributing firmware updates. When I wanted to download the fingerprint reader driver, the google drive link said that download quota has been reached for that day and that's it.

I really hate the F-keys only via Fn button. Some laptops have these goodies like automatic Fn when Alt is pressed (for Alt+F4 to work, for example).

Using a different than English keyboard in the OS is a good brain training because with the non-standard layout, you have no idea where are all the punctuation marks etc. :)

The fan can get pretty noisy quite easily, but that's understandable with this small body. And there's the easily accessible slow fan mode which reduces the noise to a reasonable level.

The calibration of the touchscreen seems to be a bit off and I haven't found a tool to correct it (under Windows).

Q

Asked by Geoff

Nov 14, 2025

Does it run Linux? Native (not in a VM/etc.), and Ubuntu.

A

Support Team

Hi, Yes, the processor in question is an x86 architecture, which means it is capable of running Linux. However, regarding 100% compatibility, we cannot guarantee that at this stage. Full compatibility will depend on the finalized hardware specifications, which are still in development. We appreciate your understanding and encourage you to stay tuned for updates as we progress. If you have any further questions, feel free to contact us.

Q

Asked by **Geoff**

Nov 14, 2025

Is the screen a shiny "glare" screen, or a matte "anti-glare" screen?

A

Support Team

Hi, Unfortunately, the specific categorization of the screen as either "shiny" or "matte" is not explicitly stated in the available information, the emphasis on glare reduction indicates that it likely has anti-glare properties. The GPD Pocket 4 features an 8.8-inch LTPS display that utilizes full-fit technology, which significantly reduces glare caused by air refraction. This design enhances the screen's visibility both indoors and outdoors, suggesting it is optimized to minimize reflections typically associated with shiny screens. We will have more details in our review of the model soon.

Q

Asked by **Marshall Gordon**

Nov 14, 2025

Could you clarify a little about the IO? You list a "1x Thunderbolt 4 Port" and separately video " Via 1x USB 4.0 Type-C @ 40GB/s" - are these referring to the same port? I see two type-c ports on the product images (aside from the module), one labeled USB4 and the other unlabeled. The announcement page says "1 × USB4, 2 × USB A" and a photo shows the unlabeled type-c port being used for power - is this port unable to be used for data transfer or perhaps a powered usb hub?

Also this might be a silly question, but I am unfamiliar with the technology- the KVM module's type-c port, can it be used for more usual data transfer, or is it only for hte KVM functionality?

A

Support Team

Nov 21, 2025

There are two USB Type-C ports, one is USB 4 and the other USB 3. Both can be used for data and power. The KVM module USB is only for use with the KVM.
